NovaWave

Precision Waves. Visible Results.

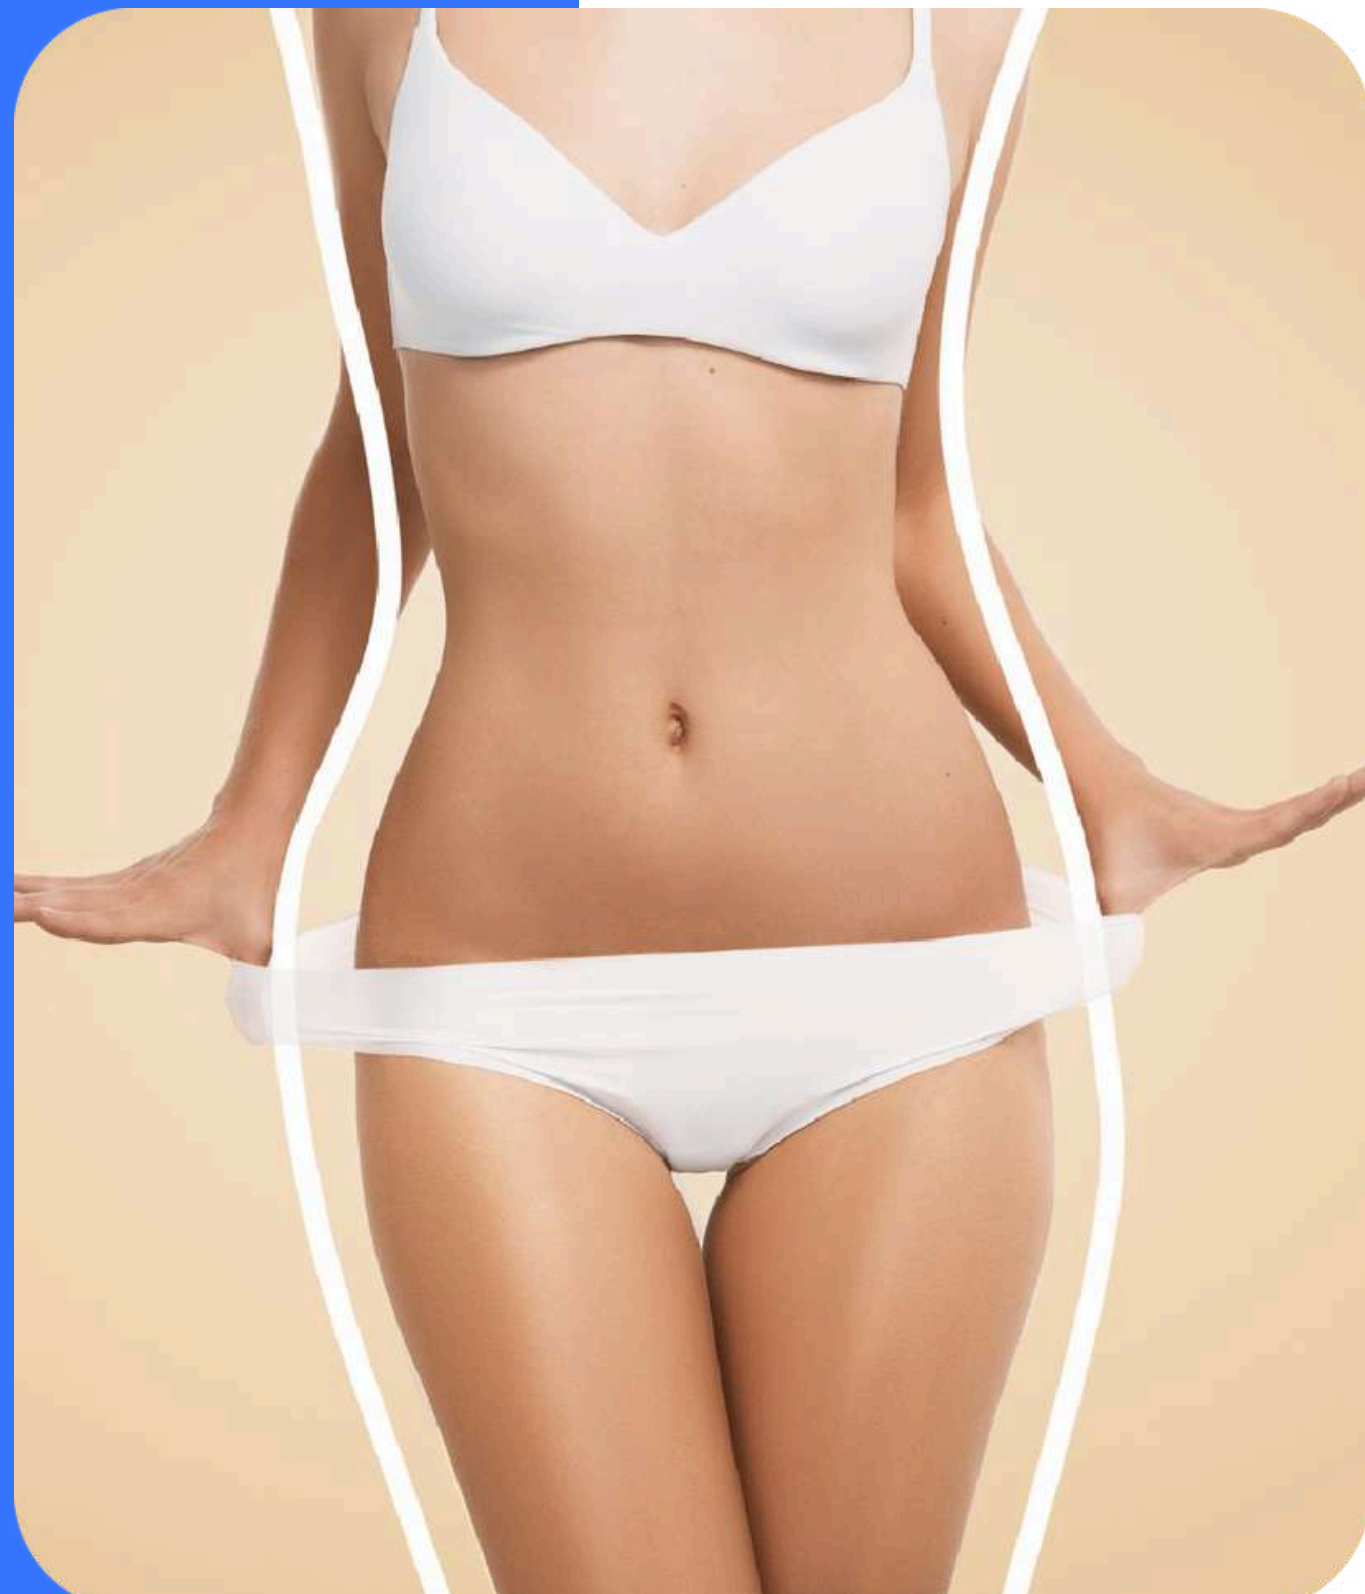

NovaWave™

Integrated Line Sculpting System
Redefining facial and body contours
through advanced energy synergy.

NovaWave™ is a next-generation, non-invasive aesthetic system designed to improve facial contours and body silhouette by combining multiple energy technologies with an intelligent pattern-based approach. It is developed to address fat volume, skin laxity, and line definition across both the face and body - comfortably and effectively.

Beyond Conventional Contouring

Traditional aesthetic devices often focus on a single layer or concern. NovaWave™ goes further by integrating **energy delivery, treatment patterns, and structural alignment** into one comprehensive solution.

NovaWave™ supports full-area contour management: - From double chin, jawline, and V-line - To abdomen, waist, thighs, arms, and hips.

This holistic approach allows visible improvements in shape, balance, and definition.

The NovaWave™ Core Concept

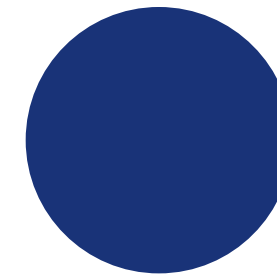

NovaWave™ is built on the synergy of three essential elements:

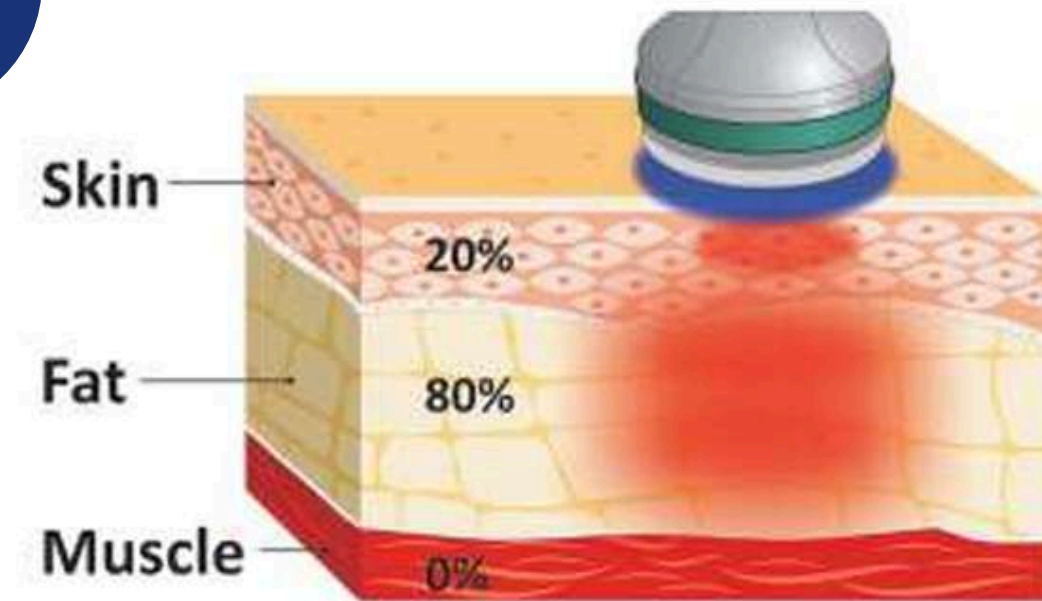

> 1. Energy Synergy

NovaWave™ combines multiple non-invasive energy modalities, each selected for its specific role in contouring: - **Ultrasound-based energy** supports dispersion of fat clusters and helps reduce localized swelling - **Radiofrequency (RF)** promotes skin tightening and elasticity - **Microwave energy** targets deeper fat layers to support volume reduction and line refinement.

Together, these energies act across multiple tissue depths for balanced, natural-looking results.

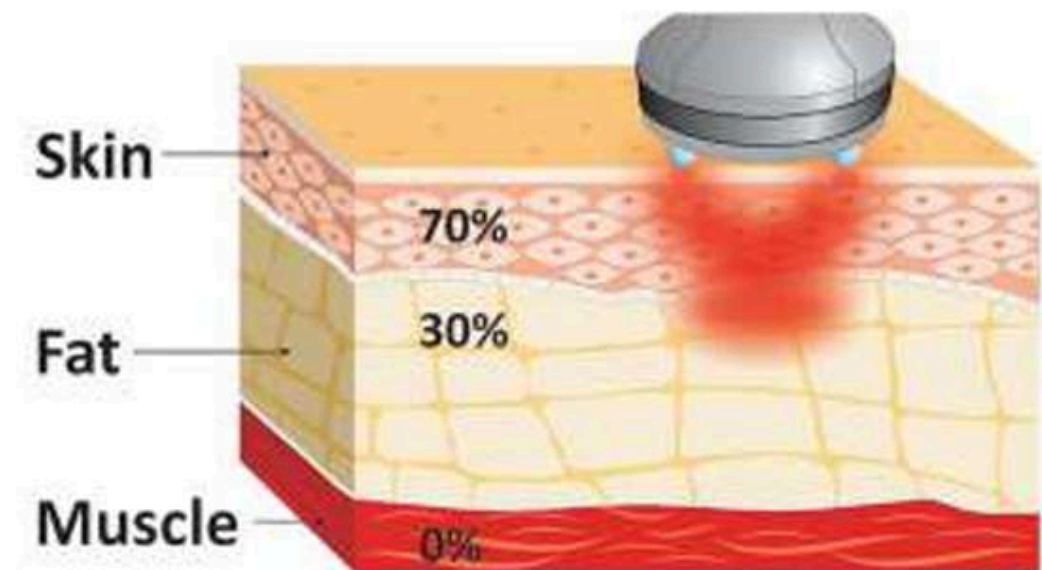

NovaWave™

Radiofrequency (RF)

B

The NovaWave™ Core Concept

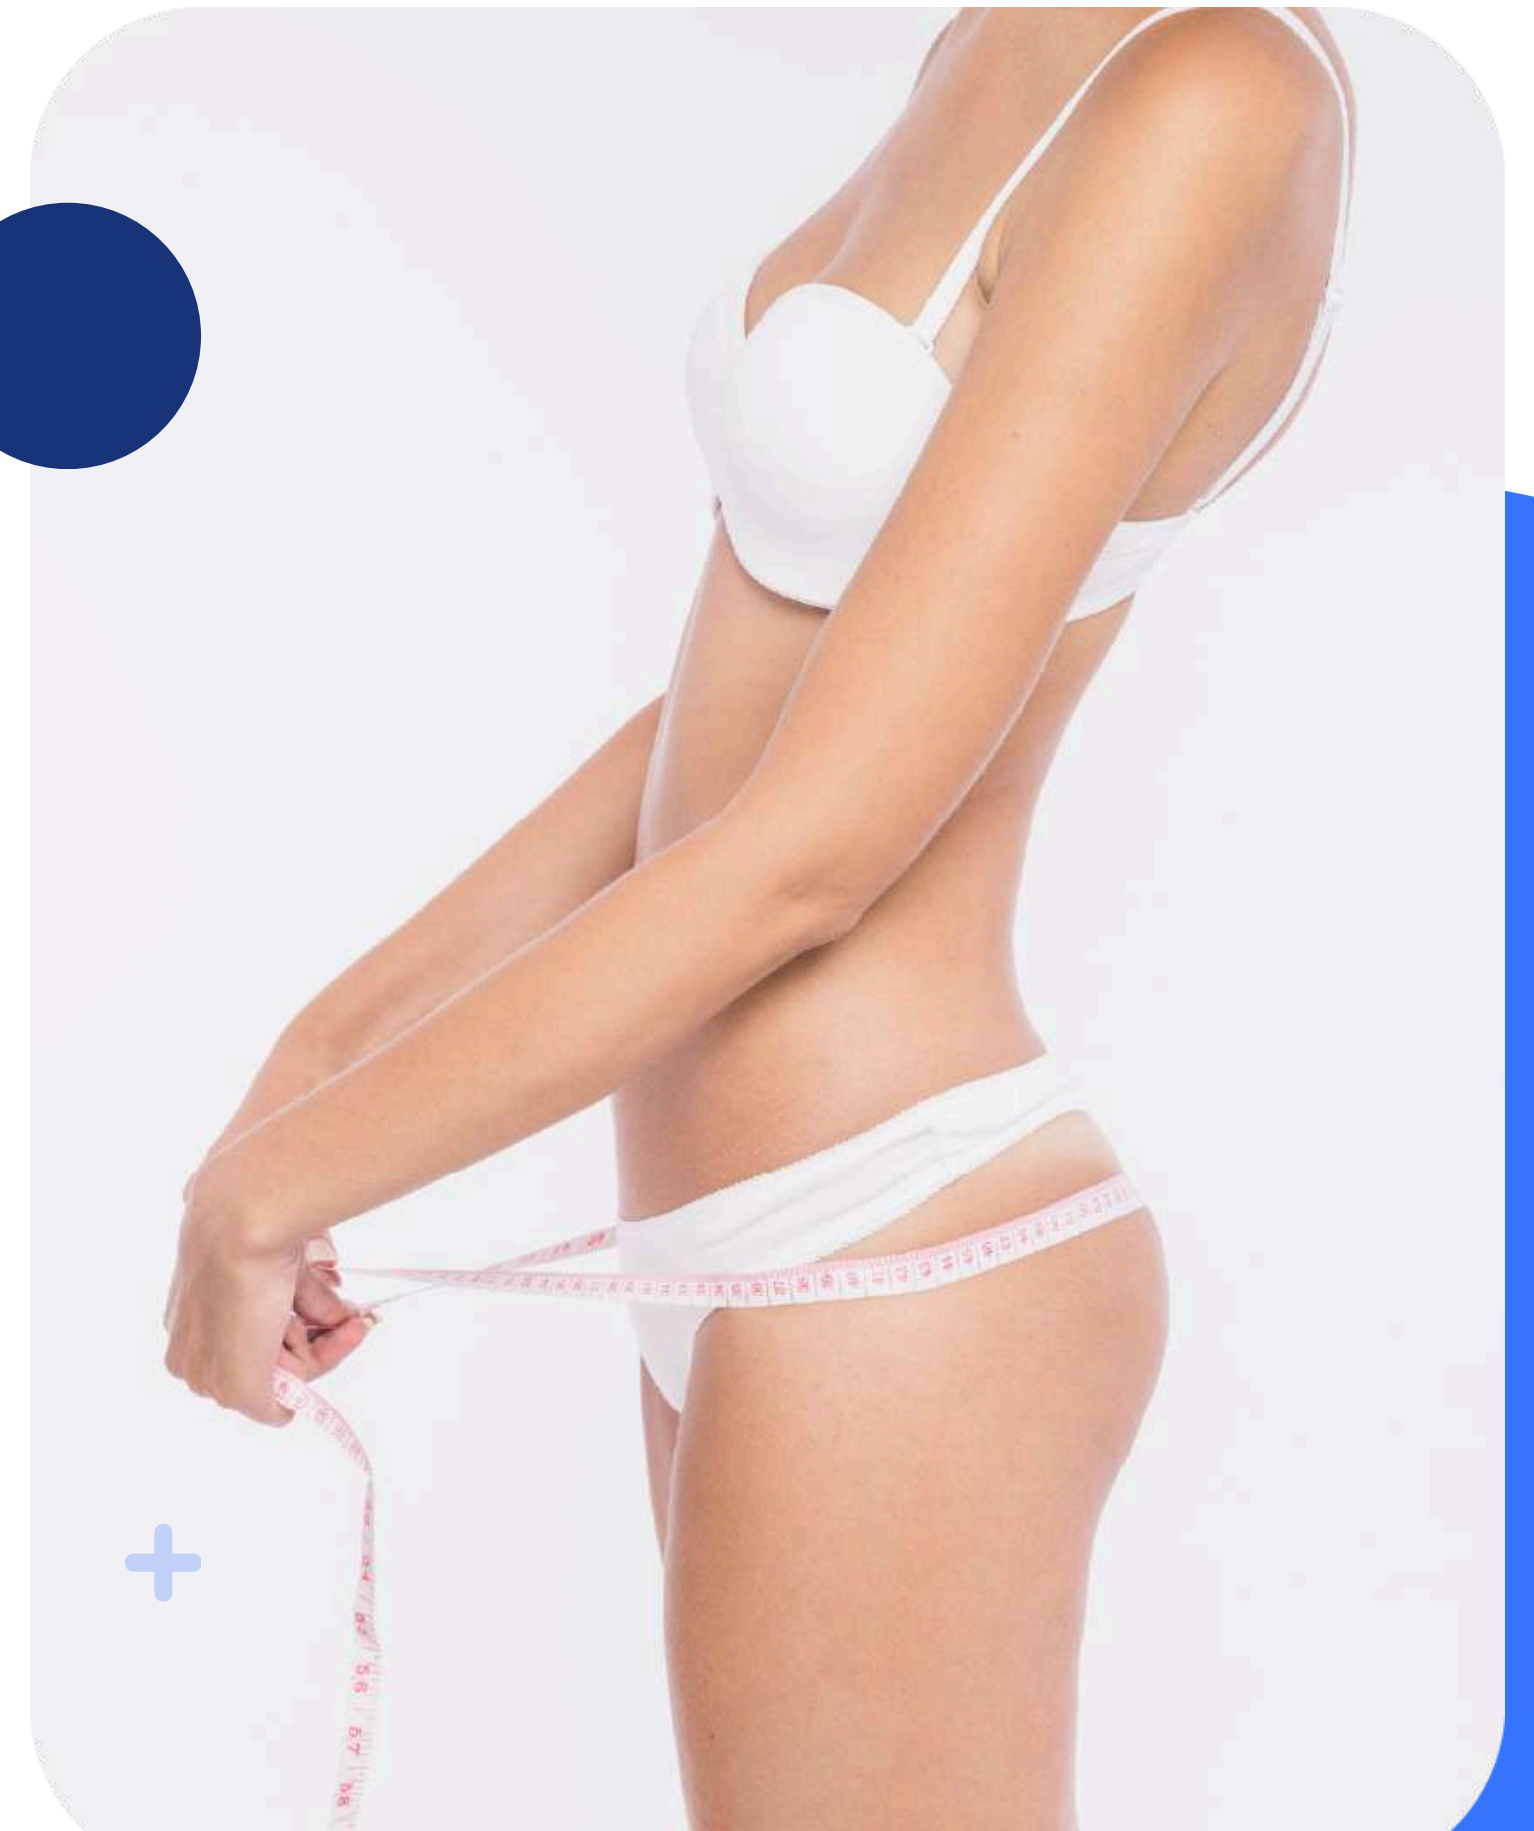

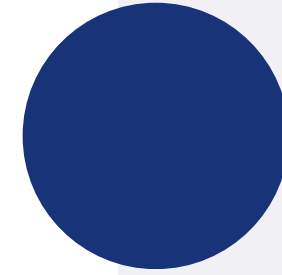

➤ 2. Ribbon Pattern Technology

NovaWave™ introduces a proprietary **Ribbon Pattern** treatment concept designed to guide energy along natural contour lines.

This pattern-based approach helps: - Reinforce facial and body contours - Maintain line continuity between treated areas - Support long-lasting shape definition.

Rather than treating isolated spots, NovaWave™ focuses on connected lines and flow.

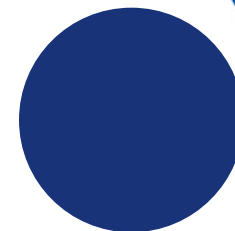

The NovaWave™ Core Concept

➤ 3. Central Axis Alignment

Body and facial contours are influenced by underlying structural balance. NovaWave™ incorporates treatment concepts that support alignment along the body's central axis. This approach may help: - Improve overall silhouette balance - Enhance waist, hip, and lower-body lines Support harmonious posture-related contours

Advanced Microwave Technology

NovaWave™ utilizes controlled microwave energy designed to preferentially interact with adipose tissue while minimizing surface impact.

- ✓ **The selected frequency allows energy to pass efficiently through water-rich skin layers.**
- ✓ **A greater proportion of energy is delivered to deeper fat tissue.**
- ✓ **Integrated cooling helps maintain comfort and skin safety**

This enables targeted contouring without invasive procedures or downtime.

Facial Applications

NovaWave™ is ideal for facial contour refinement, particularly in areas affected by fat accumulation, reduced elasticity, and line disruption.

Common Treatment Areas

- Double chin
- Jawline
- V-line
- Cheek and lower face contour
- Neck-to-jaw connection

Treatment Approach

- Support reduction of submental volume
- Improve skin firmness and definition
- Enhance continuity between face and neck lines

Body Applications

NovaWave™ addresses common body contour concerns by targeting fat volume, tissue firmness, and overall line flow.

Common Treatment Areas

- Abdomen
- Waist and flanks
- Thighs
- Arms
- Hips
- Calves

Treatment Approach

- Support reduction of fat volume
- Improve skin tone & firmness
- Enhance smooth, balanced body lines

Treatment Experience

NovaWave™ treatments are non-invasive and designed with patient comfort in mind.

- No needles or incisions.
- Minimal discomfort, supported by integrated cooling.
- No downtime in most cases.

Patients typically experience a warming sensation during treatment, followed by gradual visible improvements over time.

Safety & Comfort by Design

NovaWave™ incorporates multiple features to ensure a consistent and comfortable experience: - Ergonomic handpiece - Intelligent energy monitoring - Contact skin cooling - Stable and repeatable energy delivery.

These features help deliver reliable outcomes across treatment sessions.

Indications

NovaWave™ is intended for non-invasive aesthetic contouring of:

Face - Jawline and V-line,
Double chin,
Facial contour refinement.

Body - Abdomen,
Arms,
Thighs,
Waist and flanks.

Visible Results, Natural Progression

NovaWave™ supports the body's natural metabolic processes. Improvements typically develop progressively over several weeks as treated tissues respond to energy stimulation.

Individual results may vary depending on body type, treatment area, and protocol.

A New Wave in Facial and Body Sculpting

By combining advanced energy technologies with intelligent pattern-based design, NovaWave™ offers a modern, non-invasive approach to contouring—designed to enhance natural lines, balance proportions, and support confident results.

Before and after 3 sessions.

Before and 45 days after 1 session.
