

HP VITARAN Skin Booster

HP VITARAN Skin Booster

HP VITARAN Skin Booster is a skin barrier strengthening solution that combines hyaluronic acid and PDRN to create a thick moisture barrier with the powerful moisture absorption of the ingredients during the procedure.

It protects the skin from external irritants and free radicals, and stimulates the production of collagen and elastin. It also maximizes the effectiveness of the next stage of treatment

HP VITARAN Skin Booster

HP Vitaran Skin Booster

Enhancing moisturizing power is the basis and core of any beauty procedure

HP VITARAN Skin Booster is a powerful skin booster that contains 0.5% PDRN and 0.2% HA to hydrate and regenerate the skin.

PDRN in HP VITARAN Skin Booster stimulates fibroblasts to boost collagen production, enhancing skin elasticity and providing anti-aging effects.

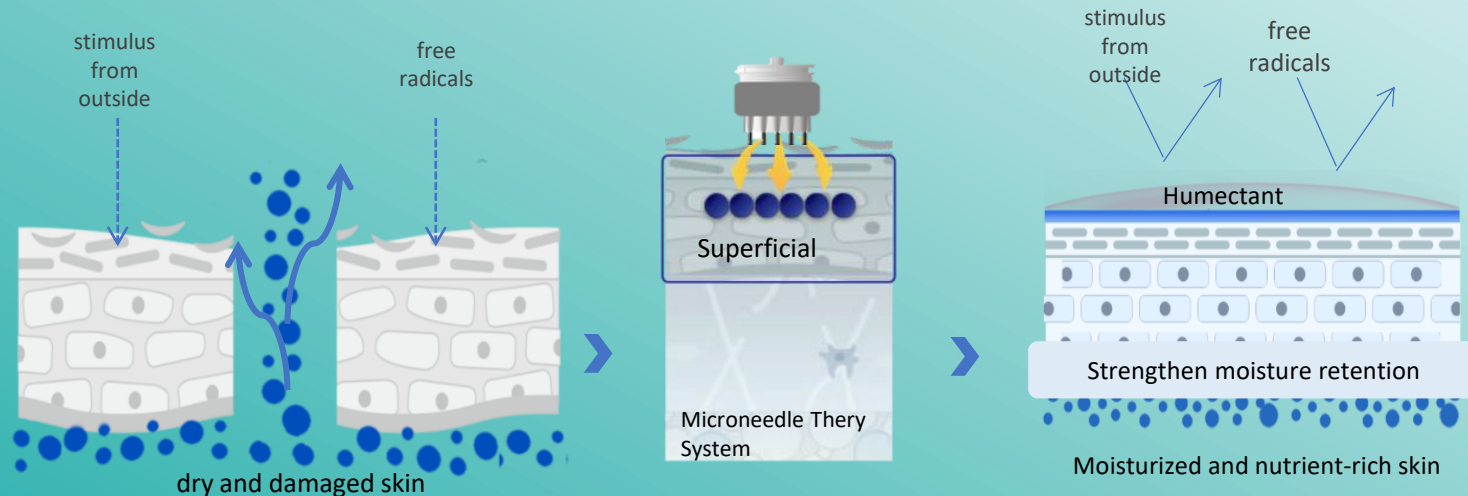

HA provides intense hydration, moisturizing the skin, improving elasticity and promoting a youthful, radiant complexion. A comprehensive skin booster that perfectly addresses skin balance and effective hydration, providing instant hydration and enhanced elasticity.

HP VITARAN Skin Booster

PDRN, an active substance for tissue regeneration, and hyaluronic acid, a natural moisturizing factor, restore the function of the skin barrier.

It prevents water evaporation, improves the water retention of the dermis, and promotes the exchange of cellular substance.

HP VITARAN Skin Booster - Ingredients

BR PHARM'S PN/PDRN

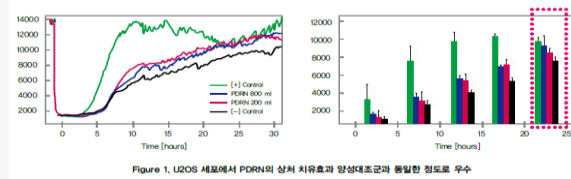

BR PN/ PDRN, Registration of raw material drug(DMF)

BR PN/PDRN papers published
in international journals

PDRN(PolyDeoxyRiboNucleotide)

PDRN, a substance that activates cell and tissue regeneration, is a safe substance that matches the DNA base composition of the human body by more than 95% and does not react with foreign substances when injected. In addition, it inhibits pro-inflammatory cytokines, increases anti-inflammatory cytokine factors, and activates growth factors to promote fibroblast differentiation and regenerate tissues. (Collagen Boosting) increases skin elasticity by increasing the density and thickness of the epidermis and dermis, and helps to restore normal skin damaged by aging, ultraviolet rays, and skin irritation.

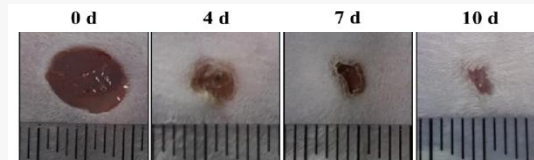

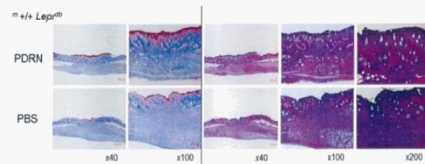

2. Materials and methods

2.1. Materials and preparation

The salmon sperm extracted polydeoxyribonucleotides (PDRN, 450 kDa, sterilized) was obtained from BR Pharm Co. (Yonju, South Korea). PDRN was dissolved in fetal bovine serum (FBS), free media with antibiotic-antimycotic, and passed through 0.2 µm sterile filter.

PDRN 비알람 제공

PDRN is considered good for skin rejuvenation because it has potential benefits such as stimulating cell repair and collagen synthesis. It also has anti-inflammatory properties, improves blood circulation, and can contribute to wound healing. These effects lead to a more youthful, vibrant complexion overall.

HA(HyaluronicAcid)

Hyaluronic acid is a human body component that exists between elastic fibers and binding fibers, and plays an important role in cell regeneration, skin moisture retention, smoothness, radiance, and elasticity. Hyaluronic acid and collagen are essential elements for maintaining the layers and structure of the skin, and it is the collagen that gives the skin elasticity, but it is the hyaluronic acid that nourishes and moisturizes the collagen.

The skin of newborn babies is soft and very moisturized because there is a lot of Hyaluronic Acid, As the aging process progresses, it decreases rapidly, causing a rapid loss of moisture and a decrease in skin elasticity and radiance

Most people resort to cosmetics when they feel their skin is dry. These methods are not direct and therefore unsatisfactory. Therefore, for dry and elastic skin, direct to the transdermal layer of the skin Delivering Hyaluronic Acid is the best way to feel the immediate effects.

HP VITARAN Skin Booster

Synergy between PDRN and HA

HP VITARAN Skin Booster is a moisturizing and regenerating solution that restores the skin's barrier function.

- HP VITARAN Skin Booster is recommended for those with dull, dry, and wrinkled skin.
- HP VITARAN Skin Booster rejuvenates and moisturizes skin to plump and hydrate skin.

1

Intensely hydrates the skin

2

Accelerates skin healing

3

Improves uneven skin texture

4

Complex of high-potency ingredients

5

Stimulates collagen production

HP VITARAN Skin Booster Efficacy

Restoration of skin barrier function

*1 gram of hyaluronic acid is equivalent to 1 liter of water, which is very moisturizing.
The moisturizing effect that makes your skin moisturized and glowing lasts for a long time.*

Skin tone up

*It stimulates the skin's metabolism and helps to quickly expel accumulated wastes.
It improves dry skin and brightens skin tone.*

Anti-wrinkle

*1g of hyaluronic acid is 16 times that of collagen, which works effectively on puffy skin,
sagging skin, and fine wrinkles on the face.*
